Prominds

Your Technology Consulting Partner

CORPORATE PROFILE

OUR KEY
DIFFERENTIATORS

- Expertise on a wide range of Technologies

- Transform Technology challenges into innovative Technology implementations

- Provide simple and cost-effective turnkey solutions

- Led by Visionary Board of Directors with more than three decades of industry experience

- Strategic alliances with key industry leaders, technology vendors, and system integrators

- Experienced and dedicated Development Teams

- Our efficient, future-ready, and customer-centric initiatives for organizational growth

OUR TECHNOLOGY SERVICES

Big Data Technologies

- Engage with client to understand their business-specific Big Data challenges and recommend possible approaches.

- Develop solutions in collaboration with client to recommend suitable solutions based on particular Big Data technology by developing proof-of-concepts.

- Leverage on our tools and frameworks to provide customized solutions.

- Work collaboratively with client to implement (architect, design, develop, QA, and deploy) the recommended Big Data Solutions

CRM Development and Implementation

- Established expertise in CRM development

- Technology expertsin various industry domains who can customize CRM like SalesForce, to fit your business needs

- Integrate custom modules with existing CRM solutions and with third party applications

- Provide development services from off-site consulting, planning, designing to implementing, training and hand holding till the team is comfortable with the new change

- Offer complete range of development and customization services tailor made for customer needs and specifications.

Custom Software Development

- Design, create, deploy and maintain custom software for clients with specific requirements, functions or organizations

- Technology expertise on the latest technologies such as Java, .Net, Python, NodeJS, Perl, Ruby on Rails, ad PHP

- Build real time applications such as chat, newsfeed

- Develop cost effective solutions that enhances program modularity and code reuse

API Development and Maintenance

- Develop APIs to access complex application data, functionality, and business logic, as well as web services.

- Develop API proxy services using HTTP endpoint to access backend services using Apigee, Mulesoft, Boomi and Axway technologies

- Assess and provide optimal security coverage to prevent API from getting misused.

- Automate and control the connection of APIs and the applications which are using the APIs

- Ensure uniformity in multiple API implementations and versions.

- Provide a framework to monitor traffic and perform data analytics

ERP Solutions

- Proven expertise in streamlining and integrating organization's key business functions

- Expertise in SAP and Oracle Apps to configure and customize systems to support customer specific business processes

- Integrate and optimize business processes across different ERP modules / functional groups

- Evaluate the need for implementing additional ERP modules for better business value / performance

- Maximize ROI

Testing Tools

- Proven expertise in Test Tools like Mercury,Selenium etc and Test repositories like QTP and Jira

- Our Testing service includes Architecting, designing and implementing test solutions to meet the needs of clients

- Our In-house and licensed tools and frameworks help accelerate the testing processes and reduce manual efforts for our clients

- Provides huge cost savings for our customers

- Our test offerings include functional testing, performance testing, security testing, mobile testing and other operational testing

Database Development

- Proven expertise in handling complex Database development and management

- Availability of highly trained staff

- Help clients focus on core business function

- Eliminate risks of errors, minimize rate of data corruption & prevent data crashes

- Ensure higher rates of data accuracy and performance

- Effective Database management
  - o Handle servers across a variety of configurations with comprehensive tools and technical expertise in a secure environment
  - o 24×7 database monitoring services, with no database downtime ever and with a regular updation of your databank
  - o Database backup and recovery of data

Data Science

- Advisory services on Data sciences

- Quantitative assessment of the problem statement

- Accurate Modelling
  - o Identifying the right Algorithm
  - o Proper Training/Learning
  - o Performance assessment of the model

- Model support & Enrichment

- Prescriptive analytics and decision science

Prominds

Data Warehousing Development

- Provide data warehouse Services for Legacy Data Warehouse Modernization, Workload Modernization Automation Strategy and Enterprise Data Warehouse Modernization

- Fully Managed Data Warehouse Solutions on Informatica

- Identify, analyze and offload data from a traditional Data Warehouse to modern Date Warehousing solutions such as Informatica, Datastage, Ab Initio, etc

- Make faster decisions and experience unparalleled performance and scalability by reducing Data Warehousing Complexity

- Quickly create large data sets with little or no changes to existing process

- Add new analytics at a fraction of a cost unlike in traditional Data Warehousing Solutions.

- Replace traditional ETL approach with a modern self-service driven approach

- Manage huge volumes of data & Deliver Faster Analytics

- Integrate with existing BI, ETL Tools

- Eliminate Data Silos

- Big Data and Advanced Analytics Ready Data Warehouse Environment

Serverless Development

- Develop serverless applications with proved experience in designing robust and unfailing serverless apps that can readily scale on need basis

- Expertise in deploying Serverless Apps on AWS Lambda

- Design apps to run on high availability compute infrastructure

- Optimize the memory and compute power needed for each Lambda function to ensure that the Lambda function runs only for the time its needed, resulting in cost optimization

- Support migrating from tradition systems to serverless architecture to facilitate scalability

Facing business challenges?

Need support with the latest Technologies?

Look no further!!

Call Us or contact us

Our Clients are our Treasured Assets.

At ProMinds, we work with organizations across the globe, across verticals, and across all functions of the organizations. Our dedication, leadership, professionalism, and commitment to quality renders us indispensable to our clients.

Prominds

Cloud Migration

- Proven expertise in popular Cloud implementations like AWS, Azure, Google Cloud platform etc

- Our Cloud computing services help our clients to meet their future business needs by dynamically scaling their cloud solutions as per their needs.

- Help enterprises to build Cloud aware applications from scratch

- Help clients to optimize/migrate and maintain existing applications to Cloud platforms.

- Leverage our cloud computing expertise to enable organizations to design, develop, integrate, and launch effective cloud-based applications.

- Offer Cloud Solutions for connected app development, cloud computing platform architecture design, cloud migration, SaaS services, DevOps, service orchestration, AI-powered applications.

- Help clients to reach their business goals by building tailor-made solutions, by our expertise in cloud technology combined with our consultative and people first approach

- Offer Cloud Operation Services through our DevOps services through CI/CD.

Prominds

Hybrid, Private, and Public Cloud Development

- Proven experience in all variants of Cloud Infrastructure

- Our expertise in Public Cloud include
  - Handling Data storage
  - Managing Data Archival
  - Host Applications
  - Designing web tiers to avoid Latency for mission critical apps
  - Hosting microsite for applications based on demand
  - Configuring Auto-scaling environment for large applications
  - Recommend Public Cloud for clients seeking low cost of ownership, automated deployments, scalability and also reliability.

- Develop applications for Private Cloud
  - To provide Strict security, latency, regulatory and data privacy levels.
  - To support high-performance access to a filesystem such as in media companies.
  - To host applications that have predictable usage patterns and demand low storage costs.
  - To provide greater adaptability, configurability, and flexibility.
  - To hosting business critical data and applications.

- Develop applications for Hybrid Cloud
  - For large organizations that want the flexibility and scalability as offered by the public cloud.
  - For Organizations that offer services for vertical markets- customer interactions can be hosted in the Public Cloud while company data can be hosted in the Private Cloud.
  - For Organizations that demand greater operational flexibility and scalability. For them, mission critical data can be hosted on the Private Cloud and application development and testing can take place in the Public Cloud.

Staffing and Recruitment

- Proven expertise in handling complex Database development and management

- Availability of highly trained staff

- Help clients focus on core business function

- Eliminate risks of errors, minimize rate of data corruption & prevent data crashes

- Ensure higher rates of data accuracy and performance

- Effective Database management

- Handle servers across a variety of configurations with com prehensive tools and technical expertise in a secure environment

- 24×7 database monitoring services, with no database downtime ever and with a regular updation of your databank

- Database backup and recovery of data

Our Vision

Since our inception in 2014, with the Headquarters in Atlanta, Georgia, USA, Prominds envisions to shift the Software Development Solutions paradigm and thereby create industry leading solutions that focus on client's financial, organizational, and structural needs.

Who We Are

Since its inception in 2014, PROMINDS, a leading Technology Solution Consulting Company, with Headquarters in Atlanta, Georgia, provides versatile, innovative, and cutting-edge solutions to companies to overcome their Technology and Business process challenges.Prominds envisions to render:

- Organizational success through employee-oriented philosophy

- Reliable and robust solutions through expertise across industry verticals

- Shift in the Software Development Solutions paradigm and create industry leading solutions that focus on client's financial, organizational, and structural needs
